

THE ACADEMY

RECYCLING STATION THE ACADEMY 15.3 Gallon (58L) per compartment

The modular design of the ACADEMY allows it to evolve with the ongoing recovery program by adding or grouping material categories. The ACADEMY is designed and manufactured in Quebec. Some metal components of this product have been manufactured for several years in the Formétal school factory, which has a mission to reintegrate young dropouts socially and professionally.

Made of electrostatically painted steel sheets, each module is completely independent and can be fixed to others. Available openings include slot, round, square, and mixed (combining slot and round). Plastic liners of 15.3 Gallon (58L) are inserted inside each compartment.

Standard colours are black, brown, steel gray, and white. (Other colours are available upon request).
