

MULTIPLUS

RECYCLING STATION **MULTIPLUS** 23 Gallon (87L) per compartment

The modular design of MULTIPLUS allows it to evolve with the ongoing recovery program, by adding or grouping material categories. Some metal components of this product have been manufactured for several years in the Formétal school factory, which aims to reintegrate young d and professionally.

Made of sheet steel finished with electrostatic paint, each module is completely independent and can be fixed to others. Available openings are the slot, circle, square, and mixed (combining the slot and circle).

Plastic liners of 23 Gallon (87L) (also available in 15.3 Gallon (58L) and 31.7 Gallon (120L)) are inserted inside each compartment.

Standard colours are black, brown, steel gray, and white. (other colours available upon request)

Customisable
